AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

1.   (Currently Amended) A ~~recording~~ computer-readable medium having a data structure for managing reproduction of still images recorded on the ~~recording~~ computer-readable medium, comprising:

a data area storing at least first and second still images; and

a playlist area storing at least one playlist, the playlist including mark information, the mark information providing presentation information on the first and second still images to provide for at least skipping from reproducing the first still image to reproducing the second still image.

2.   (Currently Amended) The ~~recording~~ computer-readable medium of claim 1, wherein the mark information includes a first mark associated with the first still image and a second mark associated with the second still image, the first and second marks providing the presentation information on the first and second still images, respectively.

3.   (Currently Amended) The ~~recording~~ computer-readable medium of claim 2, wherein

the first mark includes a first indicator indicating at least a stream of data where the first mark is placed; and

3

the second mark includes a second indicator indicating at least a stream of data where the

second mark is placed.

4.   (Currently Amended) The ~~recording~~ computer-readable medium of claim 2,

wherein

the first mark includes a first indicator indicating a point in a stream of data where the

first mark is placed; and

the second mark includes a second indicator indicating a point in a stream of data where

the second mark is placed.

5.   (Currently Amended) The ~~recording~~ computer-readable medium of claim 2,

wherein the first mark includes a type indicator indicating a type of the first mark, and the second

mark includes a type indicator indicating a type of the second mark.

6.   (Currently Amended) The ~~recording~~ computer-readable medium of claim 2,

wherein the mark information indicates a number of marks in the mark information.

7.   (Currently Amended) The ~~recording~~ computer-readable medium of claim 2,

wherein the first mark points to the first still image and the second mark points to the second still

image.

8.   (Currently Amended) A ~~recording~~ computer-readable medium having a data

structure for managing reproduction of still images recorded on the ~~recording~~ computer-readable

medium, comprising:

a navigation area including a plurality of marks, at least a portion of the marks associated with still images, each mark associated with a still image serving as a pointer to the still image to provide for skipping between still images during reproduction.

9. (Currently Amended) The ~~recording~~ computer-readable medium of claim 8, wherein each mark associated with a still image includes an indicator indicating at least a stream of data where the mark is placed.

10. (Currently Amended) The ~~recording~~ computer-readable medium of claim 8, wherein each mark associated with a still image includes an indicator indicating a point in a stream of data where the mark is placed.

11. (Currently Amended) The ~~recording~~ computer-readable medium of claim 8, wherein each mark associated with a still image includes a type indicator indicating a type of the mark.

12. (Currently Amended) A method of reproducing a data structure for managing reproduction of still images recorded on ~~the recording~~ a computer-readable medium, comprising:

reproducing at least one playlist from the ~~recording~~ computer-readable medium, the playlist including mark information, the mark information providing presentation information on first and second still images to provide for at least skipping from reproducing the first still image to reproducing the second still image.

13. (Currently Amended) An apparatus for reproducing a data structure for managing reproduction of still images recorded on ~~the recording~~ a computer-readable medium, comprising:

a driver for driving an optical reproducing device to reproduce data recorded on the ~~recording~~ computer-readable medium;

a controller configured to control the driver to reproduce at least one playlist from the ~~recording~~ computer-readable medium, the playlist including mark information, the mark information providing presentation information on first and second still images to provide for at least skipping from reproducing the first still image to reproducing the second still image.

14. (Currently Amended) A method of recording a data structure for managing reproduction of at least still images recorded on a ~~recording~~ computer-readable medium, comprising:

recording a plurality of marks in navigation area of the ~~recording~~ computer-readable medium, at least a portion of the marks associated with still images, each mark associated with a still image serving as a pointer to the still image to provide for skipping between still images during reproduction.

15. (Currently Amended) An apparatus for recording a data structure for managing reproduction of at least multiple reproduction path video data on a ~~recording~~ computer-readable medium, comprising:

a driver for driving an optical recording device to record data on the ~~recording~~ computer-readable medium;

6

an encoder for encoding at least multiple reproduction path video data; and

a controller for controlling the driver to record a plurality of marks in navigation area of the

~~recording~~ computer-readable medium, at least a portion of the marks associated with still images,

each mark associated with a still image serving as a pointer to the still image to provide for

skipping between still images during reproduction.
